A Basket of Japan Dream Peach

Packed like this, sell for fancy prices on the early market, when good peaches are always scarce.

Japan Dream Peach

In thousands of orchards the Japan Dream has earned the name of the youngest bearing and most productive peach on record. Fruit growers everywhere marvel at its wonderful performance—a peck of peaches 15 months after planting is not at all unusual. An Oklahoma planter reports 2 bushels a tree the third year.

The Japan Dream is of medium size and the fruit set on so thick that they must be thinned to keep from overbearing. Its rich, red meat and delightful aroma make it a favorite with the housewife and the most desirable early peach for canning. Doesn't get mushy like other peaches.

Ripens when good peaches are scarce—40 days before Elberta—always brings good prices. No matter how large or small your orchard, find room for Japan Dream; you will be well repaid and delighted with results. Now is your best opportunity as these low prices will not be offered again.

160 Peaches the Second Year—“Seven or eight Japan Peach planted two years ago, bore this year and they were beauties. Fruit ripe July 4th. Every peach perfect. One tree had 160 peaches. Some of my neighbors saw it and said it beat anything they ever saw. All ate some of the fruit and want some of the trees.”—J. R. Smith, Mo.

High Prices for Japan—“Had a nice crop of Japan peaches last summer. When local market was full of Greensboro and selling for 75c a bushel, Japans all sold in one day for \$1.25, and several purchasers wired for more, although the severe drouth caused them to be only medium sized. Trees were so full that thinned off half or more.”—S. VonAmmon, Virginia.

Japan Peach a Wonder—“The 5 Japan Peach are a wonder. They are fine shaped and looked like pot plants all summer. In November when I gave them a dormant spray, I found them literally covered with fruit buds.”—Eli Foorman, Indiana.

Hardy in Massachusetts—“My Japan Dream Peach tree netted me 6 peaches the first summer. The third year brought 2 bushels at one picking with an extra bushel picked from time to time.”—A. M. Miller, Mass.

Pedigree Trees at These Prices To March Twenty-fifth

Alton—The Alton is a splendid creamy white peach, splashed and shaded with red. The skin is tough and thick, so that the peach stands handling well. The flesh is firm, sweet, juicy, tender, and very pleasant. Flavor is the best. A high quality market peach, larger than Carman.

It is classed as a freestone peach, but like most of the early peaches, it is only semi-free except when fully ripe. The peach will average about 2½ inches long, roundish, oval, slightly flattened, one side just a little larger than the other.

The tree is a very large, vigorous grower, spreading, very hardy, and not injured by severe cold during the winter. Bears third to fourth year.

Early Elberta—Similar to Elberta, but sweeter and finer quality. Ripens a week earlier, lengthening the Elberta season, but not so profitable as Hottes Elberta.

Elberta. (Freestone)—A beautiful, extra large golden yellow peach, with a brilliant red cheek, firm, juicy, high flavored, rich and sweet. This is the best commercial variety, of which more have been planted and from which more money has been made than any other variety. For years it has been the standard market variety and its place in the estimation of commercial growers would be hard to fill with any other variety, for no other peach has yet been introduced that will fill all the requirements of a commercial peach with such success as the Elberta. In addition to its high quality, large size and attractive appearance, the Elberta has a tough skin, and consequently does not bruise easily and ships exceedingly well. Its only real superior is Hottes Elberta.

Late Elberta—Valuable in prolonging the season of the Elberta class of peaches.

A Field of Moncrief Peach.

Champion—Originated in Nokomis, Illinois. Many specimens have measured 10 inches in circumference. The flavor is delicious, rich, sweet and juicy; skin creamy, with red cheek, strikingly handsome. It is very hardy and productive; the largest size, highest flavor, and one of the best shippers of the early varieties; bears young. The peculiarity of this acquisition is its hardiness, and the crowning event in its history is having stood eighteen degrees below zero in the winter of 1887-8, and produced an abundant crop when the peach crop all around it was a universal failure.

Greensboro, Krummels October, McCoys Free, Capt. Ede, Chinese Cling, Elberta Cling, Mamie Ross.—Every one deserves a full page to fully describe their merits. You won't have a complete orchard without them in it.

Carman—This is a favorite variety with many grow-

ers, as it is one of the most profitable in its season of ripening ever introduced. The returns from a successful Carman orchard are almost beyond belief, and the fruit stands shipping so well that it always reaches market in prime condition. The fruit is remarkably attractive and luscious, large and broad, oval-shaped, yellowish white, flesh creamy white, tinged with red, spicy and good; free.

Belle of Georgia. (Mid-season, white freestone).—For years it has been the standard white peach in the large commercial orchards of the Southern and Central states, just as Elberta has been the standard yellow sort. The fruit is very large, rich, creamy white flesh, with a bright, red blush, and is delicious in quality. It ships well and always goes on the market in good condition. Its planting is not confined to any one section, but it is a money-maker wherever peaches grow. Ripens eight days ahead of Elberta.

For a Collection of Extra Fine Peaches

You will find it extremely difficult to surpass those listed on this sheet. Each is noted for its fine flavor and hardness. All propagated from trees of known parentage by the MONCRIEF METHOD—which means more fruit; that they will start bearing earlier in life and keep everlastingly at it.

At Special Introductory Prices for 10 Days Only

Hottes Elberta Peach

A huge gold and crimson freestone discovered in the “Million Dollar” peach district of Colorado—the greatest in the world. After seven years of testing in thousands of orchards over 32 states, it has proven itself the greatest of all peaches. The leader for profit—the best for home orchard.

Color—Rich, golden yellow with brilliant crimson blush.

common Elberta and Belle of Georgia failed to produce a bushel.

Flavor—Rich and juicy, full of sugar, superb quality, unequalled among yellow peaches.

Canning—Sweeter than Elberta. Takes less sugar. Solid as a cling. Doesn't get “mushy.”

Size—Specimens brought to our office last summer measured almost 12 inches around. Nearly one-half larger than common Elberta.

Ripening—Ready for market with the first Elbertas. Lasts until they are gone.

Flesh—Firm and meaty, finer grain than Elberta. Perfect freestone.

Bearing—A marvel in early bearing. Hundreds report trees bearing second year. “Half bushel 16 months after planting,” says a Missouri planter. Bears quick because budded from young trees.

Shipping—Firmness and long keep qualities place it at the top as a shipper.

Profits—Its large size, brilliant color, firmness and fine quality always bring 25 to 50 per cent more than common Elberta. Out-yields Elberta two to one.

Hardiness—Hardier than Elberta. Survived the frost damage, 1914, where

Only 26 More Days

Because of the threatened railroad strike our customers asked for a continuation of our Wonderful Peach Offer. The strike problem is settled so far as this year is concerned. April will be the best month to plant because of the prediction of abundant rains during that month. April rains will force the young trees to take quick root—will keep them in fine condition over a long dry summer.

Get Busy--Buy Peach Trees

We cannot hold this offer latter than April 20, 1917. Positively no further extenctions. Don't wait until the last minute. Order today.

The Winfield Nursery Company

Winfield, Kansas

"SHOW ME" Special

Prices Not Good After Mar. 25

Arkansas Black—Dark red, almost black; medium to large; a beautiful apple and in favored localities pays well. Sub-acid, coarse, but a good keeper. As it is grown in the Far West it is handsome and largely used as a show apple.

Northern Spy. (Winter)—This variety ranks next to Baldwin and R. I. Greening in importance. It is a fine apple for culinary use and its exceptionally fine flavor makes it invaluable as a dessert apple. Fruit very large, rather firm, very tender, crisp, very juicy, sub-acid; skin apple, yellow, nearly concealed with bright pinkish red mottled with carmine. Tree large, vigorous and hardy.

King David—Enormously productive, producing heavy crops of good sized fruit year after year.

It is a uniform-shaped apple, tapering toward the blossom end. Very dark, rich garnet red, showing almost a purplish-black on the sunny side of highly colored specimens. It will hang on the tree and color to a purplish black.

The flesh is firm, tinged yellow, crisp, juicy, and of good quality; a good shipper. It will succeed in states where the Jonathan averages too small in size to be of commercial value.

The tree is hardy, vigorous grower; comes into bearing very young—about the fourth year; a great apple for use as a filler. Blooms late and thrives on the stronger fertile soil, but is also a very productive apple on the thinner soils, and surpasses Jonathan in productiveness in many localities.

10-year Silver Medal and its yield of 17 bushels-1915

We also offer the following at these Special prices:—

Cooper's Early Delicious Baldwin	Ragan Greening Spitzenberg	Winesap Sweet June York Imperial	Golden Sweet Winter Banana Grimes Golden

Absolutely no Orders accepted at these Prices after

John Fleming—Virgil Route—and wives inspecting a mother tree. Silver Medal Winesap.

Wagner. (Red Winter Apple)—Wagner is one of the most beautiful winter apples ever grown. It is of the highest quality, the flesh being crisp, tender and aromatic. We know of no apple possessing greater beauty, or finer quality than Wagner. It succeeds well east and west. No orchardist's list of varieties can be complete without this beautiful and superior flavored apple. Of medium to large size; flesh firm, sub-acid and fine quality.

Stayman Winesap—Handsome red, somewhat striped. A delightful eating apple, good for all winter. Begins bearing young and yields big crops every year. Great drouth resister. Thrives well on thin soil where many apples fail. A great leader from east to west. Always brings an extra price.

Colorado Orange—Rich golden yellow; pink blush. Late bloomer, good orchard tree; popular on the markets at high price, being a very late keeper. Deserves wide planting.

Lowery—Beautiful deep red, covered with small salmon colored dots; high quality. Flesh solid, very brittle, luscious and juicy. Clear, waxy; takes a high polish. It is of value and should be planted. Keeps well in common celler, and is a splendid cold storage sort.

Magnate—A seedling of Winesap. Rich, dark crimson on yellow ground, indistinctly striped with deep purple; excellent quality.
